Test Coverage Report - FDS

FDS subsystem evidence, not the all-six-subsystem deliverable. Metrics refer to CI on develop at SHA 503465b7eb2c29b56cc2ec0d329d91d6b40853d4 (24 October 2026 UTC). Re-run on the eventual final branch SHA before declaring this final.

DOCUMENT STATUS: VERIFIED HISTORICAL CI; FINAL BRANCH RE-RUN PENDING

1 Source snapshot and validation

Item	Evidence / result
Issue	DDP-183 | GitHub issue #84
Tested commit	503465b7eb2c29b56cc2ec0d329d91d6b40853d4
Tested branch / date	develop | 2026-10-24 UTC
Backend run	https://github.com/forever-hotel/front-desk/actions/runs/40057114169
Frontend run	https://github.com/forever-hotel/front-desk/actions/runs/40057114175
Evidence branch	feature/84-fds-final-qa-evidence (created from a later develop commit; these coverage numbers are not a new run on that branch)

2 Automated test execution

Test layer	Suites	Passed	Failed	Source
Backend unit with Jest coverage	63	479	0	Backend CI run 40057114169
PostgreSQL integration	9	53	0	Backend CI run 40057114169
Backend HTTP/WebSocket E2E	10	140	0	Backend CI run 40057114169
Frontend Jest API/component	40	186	0	Frontend CI run 40057114175
Total of four CI groups	122	858	0	Does not imply 858 cross-service journeys

3 Jest measured coverage

Measured scope	Statements	Branches	Functions	Lines
Backend unit-test instrumented scope	96.89%	87.19%	96.71%	96.66%
Frontend Jest instrumented scope	89.77%	80.91%	92.36%	89.67%

Both backend/jest.config.ts and frontend/jest.config.ts enforce 80% global thresholds for statements, branches, functions and lines. Passing CI confirms those configured gates for instrumented scopes. It does not, by itself, demonstrate at least 80% change/diff coverage or 90% branching for every critical business rule.

4 Instrumented scope and exclusions

• Backend collectCoverageFrom includes source patterns under src/, libs/ and apps/; explicit exclusions include main.ts, *.module.ts, database/data-source.ts and database migrations.

• Frontend Jest instruments selected configuration, API, realtime, providers, hooks and feature API/hooks/component paths. It is not a statement about all frontend source files.

• The 53 PostgreSQL integration and 140 E2E tests are counted separately; their results do not add to the unit Jest coverage percentage.

• The 'sprint8' filename follows the required submission pattern; confirm that this run belongs to the team's official Sprint 8. This PDF is an FDS-only historical CI snapshot. The centrally requested coverage-sprint8.pdf remains a separate six-subsystem consolidation.

5 Artifacts and evidence retention

Artifact	GitHub run / expiry	Notes
front-desk-backend-coverage-116	https://github.com/forever-hotel/front-desk/actions/runs/40057114169 | expires 2026-11-07 UTC	HTML and related coverage evidence in GitHub Actions artifact
frontend-coverage	https://github.com/forever-hotel/front-desk/actions/runs/40057114175 | expires 2026-11-07 UTC	HTML and related coverage evidence in GitHub Actions artifact

Download both artifacts and archive them securely before their expiry. Do not commit bulk autogenerated HTML/LCOV coverage trees to the source repository without an explicit team decision.

6 Reproduction and pending actions

• Use the final reporting commit and capture its SHA/date. From backend/: npm run test:cov -- --runInBand. From frontend/: npm run test:cov.

• Run backend test:integration only against disposable seeded PostgreSQL 16, followed by test:e2e; CI workflow includes schema, migrations and seed setup.

• Update the report after final-branch CI. Report skipped tests and failing suites, if any, rather than carrying forward earlier results.

Evidence: https://github.com/forever-hotel/front-desk/actions/runs/40057114169 | https://github.com/forever-hotel/front-desk/actions/runs/40057114175
